

WHAT IF...

(PASS)

We could make life easier for each passenger?
(especially those with disabilities)

With Our Passenger Accessibility & Services System (PASS) ...WE CAN !

With our (PASS) System, you can now enjoy ultimate comfort with control of vents and air pressure at your fingertips with Braille.

PASS has been designed and built upon the foundation of our highly successful PES/PSS+P system, operational since 2014, that provides individual passenger control of reading/call lights/chimes, audio volume/channel selection and USB power all rolled into one PCU unit. Like the PES/PSS+P system PASS is fully compliant with all DO-160 airworthiness requirements.
