REVISION HISTORY

Rev.	Date	Approval	Revision Summary
L	Dec 31, 1969		
New	Feb 04, 2009		Original Issue
A	May 04, 2009		Addition of Panasonic RD-AX6735-01, RD-AX6736-01, RD-AV9811-01 and RDAV9812-01 and modification to RD-AV1113 (add -XX).
B	May 14, 2009		Addition of Panasonic RD-AV9841-01.
C	Jul 02, 2009	ICI-2-INSP	Addition of Panasonic RD-AV9842-01.
D	Aug 07, 2009	ICI-2-INSP	Addition of Rockwell 700-2200-00X.
E	Oct 05, 2009	ICI-2-INSP	Addition of Panasonic RD-AV7151-01.
F	Oct 22, 2009	ICI-2-INSP	Addition of Panasonic RD-AV3007-05.

TABLE OF CONTENTS

1.0 INTRODUCTION	4
2.0 OVERVIEW	4
3.0 RESPONSIBILITIES	4
4.0 PROCEDURE REQUIREMENTS	5
5.0 WORKING INSTRUCTIONS	7
6.0 CAPABILITY LIST	8
7.0 NEW COMPONENT VALIDATION	9

1.0 INTRODUCTION

1.1 This Inflight Canada procedure was established to create a uniform approach for the improve monitoring and control of the Inflight Canada approved documents.

2.0 OVERVIEW

2.1 This document defines the maintenance approval limitations of the company by publishing the Company Maintenance list. Refer to section 6 of this document.

2.2 This document also supply the necessary references for the proper completion of the Shop/ Work Orders as well as the Purchase Order documents.

3.0 RESPONSIBILITIES

3.1 All work performed which pertain to maintenance of aeronautical product should be carried out under controlled conditions which begin by the issuance of an official Order from the aeronautical product owner/operator.

3.2 It is the responsibility of each employee, from material to production to inspection and upper management to make sure that the entire work has been completed in accordance with all applicable engineering documents, Quality Program Procedures and Working Instructions.

4.0 PROCEDURES REQUIREMENTS

4.1 A Shop/Work Order cannot be created without the prior issuance of an Order from the aeronautical product owner/ operator.

4.2 The Order document must contain the following information:

4.2.1 The name of the customer for which the material is destined.

4.2.2 A unique customer Order reference number.

4.2.3 The aircraft type, model, registration and serial number, when applicable where the part is originating from.

4.2.4 The aeronautical product(s) to be maintained complete part number and serial number when applicable.

4.2.5 A description of the problem experienced with the product or reason for removal.

4.3 Prior to start of the maintenance process, it is the responsibility of the Production Manager to validate all the information supplied on the Customer Order with the Quality Assurance Department. After validation, then the maintenance process can take place.

PROCEDURES REQUIREMENTS (CONT'D)

4.4 Each Shop/Work Order will be completed and will specify the details all working steps, special working conditions, tooling and equipment essential to effects proper and safe maintenance processes.

4.5 All inspection steps will be accomplished by quality assurance approved inspectors. When quality issues are identified, immediate corrective actions are prepared and approved in reference to the procedures stated in Quality Program Procedure No. IA96203, Non Conformance and Corrective Action Procedures and associated Working Instructions.

4.6 The Shop/Work Order document must content the following information:

4.6.1 The aeronautical product part number and serial number (only when the product is serialized).

4.6.2 The aeronautical product description and manufacturing date when applicable.

4.6.3 A list of all the necessary parts that has been used in the maintenance process using the part number, description, quantities and batch numbers.

4.6.4 All necessary comments that will well describe the production and inspection works that has been performed with reference to approved data such as CMM (Component Maintenance Manual) or other approved engineering references.

4.6.5 The name(s) of the technician(s) performing the work.

4.6.6 The name of the final inspector approving the work.

6.0 CAPABILITY LIST

6.1 Company Maintenance Capability List.

6.1.1 The next pages includes all the aeronautical products within the company maintenance scope of approval and is based on maintenance manuals and appropriate test equipment availability for all those aeronautical products within the company.

6.1.2 This Capability list is held up to date by the Production and Quality Manager. Any change will be forward to Transport Canada in a timely matter and as required.

6.1.3 The technical data used for all maintenance production, inspection and certification of aeronautical product must be at the latest approved revision. Verification must be conducted.

7.0 NEW COMPONENT VALIDATION

7.1 Prior to incorporation of new component to the Company Maintenance Capability List, control and validation of the company maintenance capability of the new component must be conducted by the Quality Manager to identify if the company have all the necessary approved maintenance data, the data itself (i.e. Component Maintenance Manual), the necessary replacement parts as listed and in conformance to the technical data , the necessary tooling, facilities, test equipment and expertise to maintain and release to service the aeronautical product.

7.2 This validation can be accomplished by the completion of Inflight Canada Form ICI 063 which is part of the company Quality Records. Refer to QPP No. IA96207.
